SUMMARY

AI Engineer with 1 year of experience shipping production GenAI features in B2B SaaS, specializing in agentic AI, stateful LLM workflows, RAG, tool orchestration, and AI safety. Experienced with LangGraph, PydanticAI, FastAPI, PostgreSQL, MCP, and LLM observability.

EXPERIENCE

Associate AI Engineer, SoftSages, Vadodara | Dec 2025 – Present

- Building Mizo, an AI-native email platform replacing a SaaS dashboard with one conversational interface.
- Replaced a six-step campaign dashboard with a conversational workflow, reducing campaign creation time from **10–15 minutes** to **under 5 minutes (~60% reduction)**; collapsed audience targeting to a single natural-language instruction.
- Architected the agent runtime using PydanticAI on a LangGraph state machine with async PostgreSQL checkpointing; built **25 typed tools** for generation, editing, versioning, and dispatch, with durable state recovery and an **interrupt + once() idempotency guard** protecting the irreversible send action.
- Implemented **defense-in-depth** security for a multi-tenant AI system, combining ownership-checked checkpoint reads, per-user CRM tokens, per-session advisory locks, and regex-based input filtering with **12 guardrail modules** and shadow evaluation for safe rollout. Added image-upload protection using **Tesseract OCR** to detect embedded prompt injections, backed by **Gemini safety classification** and **NVIDIA NeMo Framework** for content-policy enforcement.
- Added hybrid retrieval (vector + PostgreSQL full-text via Reciprocal Rank Fusion) and cross-session memory for brand voice/sender identity; instrumented every call with **Langfuse/OpenTelemetry** and migrated CRM transport to **MCP**.
- Built supporting ML services: **KMeans-based predictive lifecycle** segmentation with **six engagement-based labels** and a **FAISS-backed send-confidence** scorer using cross-campaign retrieval to flag likely underperformance before campaign dispatch.
- Built a **765-test suite** across **87 files** using offline TestModel/FunctionModel seams, making non-deterministic LLM workflows deterministic and reproducible in CI.

Data Scientist Intern, Reliance Jio, Navi Mumbai | Jan 2025 – May 2025

- Implemented and compared **six LangGraph orchestration patterns**—Sequential, Parallel, HITL, Hierarchical, Event-Driven, and Swarm/Supervisor—and built **RAG pipelines** with **FAISS/MiniLM**.
- Benchmarked open-source LLMs (LLaMA, DeepSeek, Qwen) for local deployment and prototyped **MCP**, **Mem0**, and RL-based agent workflows.

PROJECTS

Pluto Road Carriers — Fleet & Logistics Management App

- Built a multi-tenant Flutter/Supabase app with real-time state sync; enforced data isolation through PostgreSQL RLS and PL/pgSQL RBAC procedures.
- Built DbSyncer to auto-resolve trip/driver/truck state mismatches and implemented trip lifecycle, expense, broker-balance, and payment workflows with overpayment validation.

Head 2 Heal — AI Mental Health Platform

- Built a stateful conversational agent using LangGraph with memory-based flows for personalized, context-aware interactions.
- Implemented a multi-LLM architecture using Gemini, LLaMA 3.2, and DeepSeek, served through a FastAPI backend for real-time client interaction.

SKILLS

GenAI / Agentic AI: LangGraph, PydanticAI, RAG, LLMs, AI Guardrails, Prompt Engineering, Tool Calling

Backend: Python, FastAPI, Async APIs, PostgreSQL, MCP

Retrieval: Vector Search, Embeddings, PostgreSQL Full-Text Search, RRF, FAISS

Reliability / Security: Multi-Tenant Systems, Prompt Injection Defense, Idempotency, HITL

Observability: Langfuse, OpenTelemetry

Languages: Python, SQL, JavaScript

Cloud: AWS, Azure

EDUCATION

Navrachna University, B.Tech in Computer Science — 81.9% | June 2022 – June 2025

CERTIFICATES

AWS ML Foundations | AWS ML for NLP | AWS Cloud Security | AWS Cloud Foundations | LangGraph Introduction | Skill India Cybersecurity
